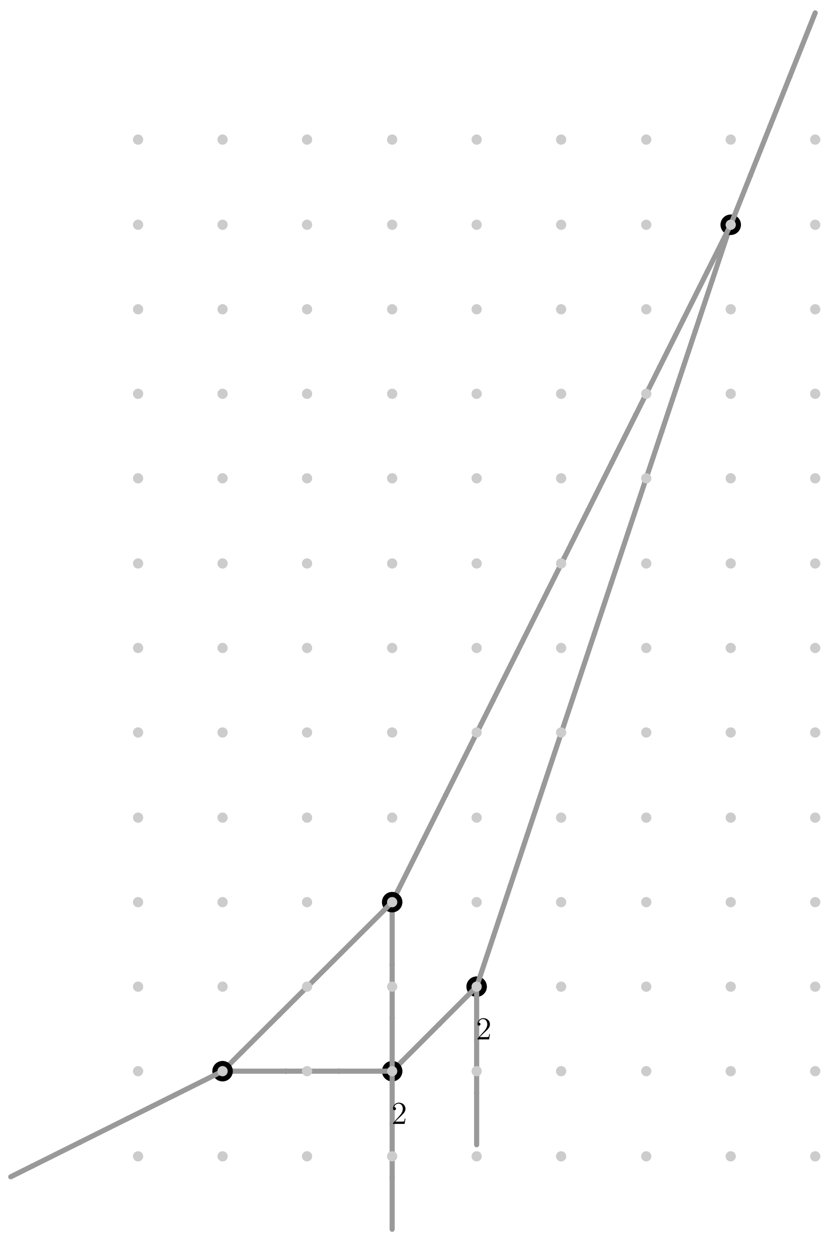
The Tropicalisation of

$$f = -x^5 + (242 \cdot t^4 + 119 \cdot t^6 + 25 \cdot t^8) \cdot x^4 + (9 \cdot t^6 - 14598 \cdot t^8 - 15429 \cdot t^{10} - 3990 \cdot t^{12} - 225 \cdot t^{14}) \cdot x^3 + (-2 - 2 \cdot t^2) \cdot x^2 y + (-2178 \cdot t^{10} - 5346 \cdot t^{12} + 127386 \cdot t^{14} + 118350 \cdot t^{16} + 27000 \cdot t^{18}) \cdot x^2 + (242 \cdot t^4 + 352 \cdot t^6 + 110 \cdot t^8) \cdot xy + y^2 + (131769 \cdot t^{14} + 383328 \cdot t^{16} + 398574 \cdot t^{18} + 174240 \cdot t^{20} + 27225 \cdot t^{22}) \cdot x$$

The vertices of the tropical curve are:

$$(-3,-9),\ \ (0,0),\ \ (-4,-10),\ \ (-4,-8),\ \ (-6,-10)$$



The Newton subdivision of the tropical curve is:
