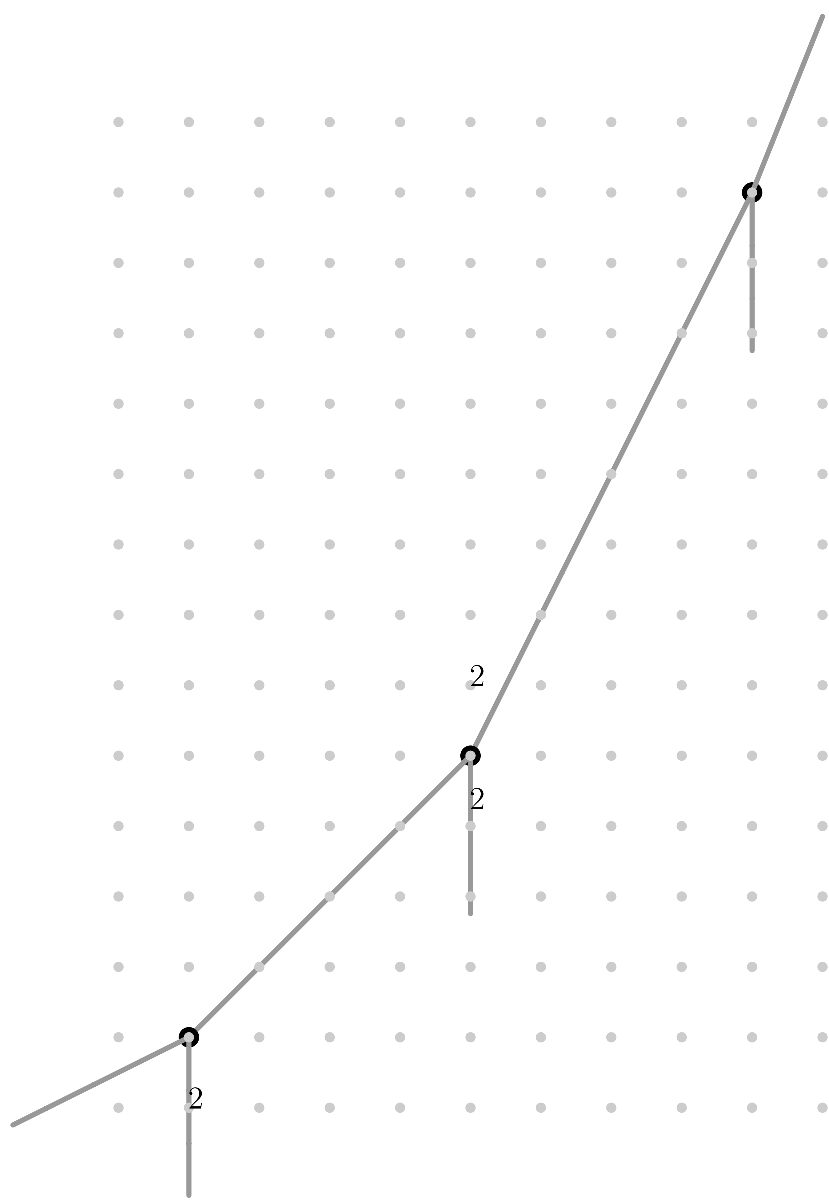
The Tropicalisation of

$$f = -x^5 + (-1 - 2\cdot t^2 + 241\cdot t^4 + 110\cdot t^7 + 9\cdot t^8 + 25\cdot t^{10})\cdot x^4 + (242\cdot t^4 + 484\cdot t^6 + 110\cdot t^7 - 14390\cdot t^8 + 220\cdot t^9 + 43\cdot t^{10} - 13200\cdot t^{11} - 2119\cdot t^{12} - 3000\cdot t^{14} - 990\cdot t^{15} - 225\cdot t^{18})\cdot x^3 + (-14641\cdot t^8 - 29282\cdot t^{10} - 13310\cdot t^{11} - 16819\cdot t^{12} - 26620\cdot t^{13} - 7381\cdot t^{14} - 14300\cdot t^{15} + 123541\cdot t^{16} - 1980\cdot t^{17} - 3250\cdot t^{18} + 118800\cdot t^{19} - 450\cdot t^{20} + 27000\cdot t^{22})\cdot x^2 + y^2 + (131769\cdot t^{16} + 263538\cdot t^{18} + 119790\cdot t^{19} + 131769\cdot t^{20} + 239580\cdot t^{21} + 27225\cdot t^{22} + 119790\cdot t^{23} + 54450\cdot t^{24} + 27225\cdot t^{26})\cdot x$$

The vertices of the tropical curve are:

$$(0,0),\quad (-4,-8),\quad (-8,-12)$$



The Newton subdivision of the tropical curve is:
