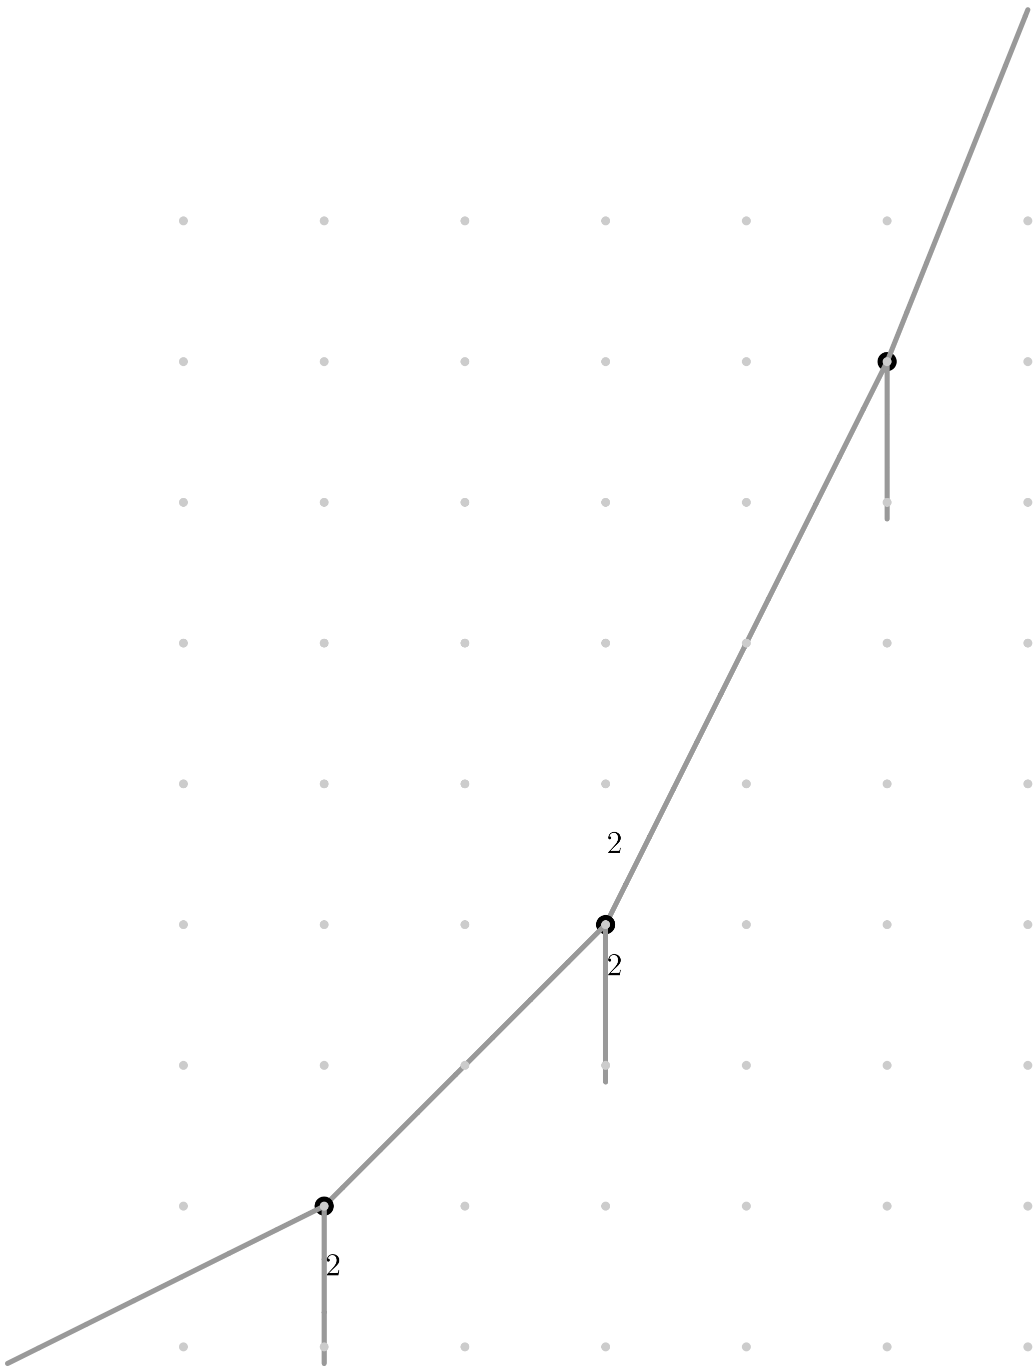
## The Tropicalisation of

$$f = -x^5 + (-1 + 6 \cdot t^2 + 19 \cdot t^4 + t^6) \cdot x^4 + (8 \cdot t^2 + 20 \cdot t^4 - 95 \cdot t^6 - 46 \cdot t^8 - 15 \cdot t^{10}) \cdot x^3 + (-16 \cdot t^4 - 176 \cdot t^6 - 116 \cdot t^8 - 40 \cdot t^{10} - 36 \cdot t^{12} - 16 \cdot t^{14}) \cdot x^2 + y^2 + (256 \cdot t^8 + 768 \cdot t^{10} + 832 \cdot t^{12} + 384 \cdot t^{14} + 64 \cdot t^{16}) \cdot x$$

The vertices of the tropical curve are:

$$(0,0), \quad (-2,-4), \quad (-4,-6)$$



The Newton subdivision of the tropical curve is:
